MEDIASERVER TECHNOLOGY

Hot News!

- State of The Art media server technology with integrated light and media control.

- Panoramas or videowall with up to twelve (Yes, 12!) displays per server@ 8 megapixels and nearly infinite cascading.

- We can offer same functionality and more, at a fraction of the cost for traditional video processor technology.

- You do not need one computer with expensive licence dongle per display anymore.

- Far less display syncronizing issues.

- .Up to SXGA 1280x1024 resolution per display, gives ultra crisp pictures and motion graphics.

- Fits any environment, stage, event or expo. completely scalable and future-safe solution.

- Will be avaliable for both hire, sales and complete installations.

Need high resolution content and visuals to fit Your show?

No problem, We offer production, editing, compositing and 3D modelling of high quality motion graphics and video. All encoded and rendered to adapt to our media servers.
